HELP PREVENT WEED SPREAD

Weeds have a significant impact on the alpine environment. Many of the resort's weeds were initially introduced as garden plants or to help stabilise modified ski slopes, unaware of the impact they would have on our native flora and fauna. The large number of people, vehicles and machinery entering the resort continues to pose a risk of new weeds being introduced.

Please do the right thing to prevent weed seed spread by brushing down and washing boots, gaiters and bikes. There is a hose at the Bike Wash Station located across the road from the Falls Creek Police Station.

Please report all weed sightings to Falls Creek Resort Management office or email: landmanagement@falls creek.com.au and include details on the location, number of plants and/or photos.

This project has been supported by the Victorian Government as part of the Victorian Landcare Grants Program
